WHAT YOU'RE HOLDING

The Problem Nobody Talks About

Most founders think investor outreach is a copywriting problem. If I just write a better email I'll get more replies. So they spend hours on the subject line. A/B test the opening sentence. Hire a copywriter. And nothing changes.

Because the problem was never the copy. The problem is timing.

Investors are not always open for business. Every fund operates on a deployment cycle. There are windows where they are actively writing checks — and long periods where they are not. Outside those windows it doesn't matter how good your email is. They are not investing.

And they will never tell you this on a call. They take the meeting, ask smart questions, seem interested — because staying close to deal flow benefits them regardless of whether they're deploying.

This is why fundraises take 9 to 12 months. Not because the business isn't good enough. Because founders are pitching into closed windows over and over without knowing it.

Claude changes everything. This PDF gives you the exact 5-prompt system to identify which investors are in an active deployment window right now — and build outreach around that signal.

PROMPT 01

Signal Research — Find Who Is Actively Deploying

Before you write a single word of outreach you need to know which investors are in an active deployment window right now. Use this prompt to build your signal intelligence.

> "You are an investor signal analyst. I am raising a [STAGE] round for a [COMPANY TYPE] company in the [SECTOR] space. I need you to help me identify the signals that show a venture capital firm or family office is actively deploying capital right now. Break down what public data sources I should be checking and what specific signals to look for."

The 8 Signals That Matter Most

Claude will return a full breakdown. But here are the eight signals I've found matter most:

01 Recent Portfolio Announcements

3+ new investments announced in the last 60 days = actively deploying. Last announcement 18+ months ago = slowed down or between funds.

02 Form D Filings

When a fund raises from LPs they file with the SEC. Public data. New filing = fresh capital = active deployment window. Almost nobody tracks this.

03 Fund Vintage Timing

Know when a fund was raised and you can estimate exactly where they are in their cycle. Early vintage = deploying. Late vintage = winding down or raising next fund.

04 Sector Mandate Shifts

Multiple investments in the same sector over a short window signals an active mandate. If your company fits that mandate there is a warm conversation waiting.

05 Co-Investment Appetite

When a lead investor wants co-investors they are actively making introductions right now. Get in front of that deal flow.

06 Personnel Changes

A new CIO or allocation head means a mandate reset. New leadership rebuilds deal flow from scratch. That is an open door most founders never take.

07	**Endowment & Pension Reports** Strong institutional performance means LPs are increasing allocations and looking for new managers to deploy through. Track these reports.
08	**Conference Attendance** An investor showing up at 3 sector-specific conferences in 90 days is in active sourcing mode. We track this across major LP and GP conferences globally.

PROMPT 02

Investor Identification — Build a Profile on Each Active Investor

Once Claude flags which investors are showing active deployment signals, use this prompt to build a deep profile on each one before you reach out.

> "I am preparing outreach to [INVESTOR NAME] at [FIRM NAME]. Based on their recent portfolio activity, fund focus, and public information, help me build a brief profile that covers: their current sector focus, their typical check size and stage, recent investments they've made, any mandate shifts you can identify, and the most compelling reason why my company would be relevant to them right now."

This is what Hormozi meant when he said personalize the crap out of it. Not just their first name. Their current mandate. Their recent moves. Why your deal fits their thesis right now. That level of personalization is what makes cold outreach feel like warm outreach.

PROMPT 03

Personalized Outreach — Write the Signal-Driven Email

Now you're ready to write the actual outreach message. This prompt uses everything you've built — the signal intelligence and the investor profile — to create an email that is impossible to ignore.

> "I am a founder raising a [STAGE] round for [COMPANY DESCRIPTION]. I am reaching out to [INVESTOR NAME] at [FIRM NAME]. Here is their investor profile: [PASTE PROFILE]. Here are the active deployment signals I've identified for them: [PASTE SIGNALS]. Write me a cold outreach email that references why this conversation makes sense right now based on their current mandate and deployment signals. Keep it under 150 words. No fluff. Lead with the signal. Make it impossible for them to think this is a generic email."

What comes back will be completely different from any cold email you've sent before. Because it's not built around your company. It's built around their current moment. You're not asking them to be interested in you. You're showing up at the exact moment they are already looking for something like you.

PROMPT 04

The Deal Brief — Close the Gap Between Reply and Meeting

This is the piece most founders skip. And it's the one that closes the gap between a reply and a booked meeting. Every outreach message should be accompanied by a deal brief.

> "Create a deal brief for my investor outreach to [INVESTOR NAME]. The brief should cover: a one paragraph summary of my company, why the timing is right for this conversation based on [SIGNALS], why my deal fits their current mandate, the specific opportunity I am bringing to them, and a clear next step. Keep it to one page. Write it as if you are a seasoned investment banker preparing context for a warm introduction."

Send this as a PDF or Google Doc link inside your outreach email. When an investor opens a message that comes with a deal brief already prepared — the entire dynamic shifts. You are not cold pitching. You are showing up prepared with context and a reason. That is what we call a signal-driven introduction. And that is why our campaigns hit 27% positive reply rates while the industry average is 2%.

PROMPT 05

Follow Up Sequencing — Turn Silence Into Meetings

Most founders give up after one email. That is one of the biggest mistakes you can make. Use this prompt to build an intelligent follow up sequence that references new signals with every touch.

> "I sent an initial outreach email to [INVESTOR NAME] on [DATE] referencing [SIGNAL]. They have not replied. Help me write a five-touch follow up sequence that: references a new signal or development each time, adds new value with each touch point, never feels like a generic follow up, and builds urgency naturally without being pushy. Space the touches 4 to 7 days apart."

Each follow up Claude generates will reference something new. A new portfolio announcement. A new fund filing. A relevant market development. That is the difference between a follow up sequence that converts and one that gets you marked as spam.

WHAT CHANGES WHEN YOU USE THIS

The Results Speak for Themselves

01

Reply rates go up dramatically

Not because you're sending more. Because everyone you're reaching out to has shown active deployment signals. You're not wasting messages on investors in closed windows.

02

Your conversations are completely different

When an investor gets a message that references their current mandate and deployment signals they don't feel cold pitched. They feel like someone did their homework. That changes their energy before you say a single word.

03

Your raise timeline compresses

The reason most fundraises take 9 to 12 months is closed windows. When you only pitch into open windows that timeline shrinks dramatically. We've watched founders close rounds in 6 to 11 weeks using this system.

Want Us To Run This For You?

Building the infrastructure to track 8 signals across hundreds of investors in real time takes years. We've already built it.

We identify which investors are actively deploying in your sector right now and get you in front of them with signal-driven introductions — with full context and a deal brief.
